

1. Introduce yourself to the group and the class
2. Q&A about key concepts from the lecture
3. Here is [my chat with ChatGPT](#) ↓ about the Health Belief theory /model. Now please chat with it yourself. Choose a topic related to concepts we discussed and share with your group and class. Here are some ideas:

- **Think of some examples of ideas/theories in your field**
  - You can ask ChatGPT to remind you
- **Find a related reading (peer-reviewed paper)**
  - Ask ChatGPT but don't trust its reference or description; find the paper
- **Identify, in the abstract or introduction of that paper, types of reasoning or principles we discussed (e.g., induction, deduction or abduction)**
  - Maybe ChatGPT can help with this too?? But you need to know if it's correct
